

KidzLabs® Magnetic Racer

Instructions

1. Push or pull the Magnetic Racer with the Mini Mighty Magnet.
2. The Magnetic Racer works through tabletops too!
3. They make cool fridge magnets that move over the fridge as well!

How Does It Work?

There is a magnet embedded inside the racer. When the Mini Mighty Magnet is placed near the Magnetic Racer, it will attract the Racer or push it away, depending on the orientations of the poles. Magnets have a north pole and a south pole. Opposite poles attract and same poles repel. Magnetic force also works through a solid, so the Racer may still be controlled by the Mighty Magnet placed under the tabletop.

Did You Know?

The principle of magnetism is used to propel special trains that can travel at speeds of over 500 km per hour. These trains are known as magnetic levitation trains, often abbreviated to maglev trains. Maglev trains are used in many countries, including Germany, Japan and China.
