

How to Put Together Build Your Own BattleBots for a Winning Strategy

January 30, 2019 by Sydney Hanner

Not sure how to play (and win) with HEXBUG BattleBots? A winning strategy is all in your build. Here we'll talk about how to assemble your Build Your Own BattleBot for different game-play strategies.

We're all about getting creative with how you play with BattleBots, but sometimes, a little strategy goes a long way. There's quite a few weapon, armour and wheel options, so how do you decide which accessories to use? Let's break it down.

Choosing your wheels (and changing batteries)

Let's start with the wheels. There are two different types of wheels included in the BattleBots Build Your Own Bots sets. One wheel type (the ones with the red gears) are designed for more torque, and thus a sturdier, but somewhat slower, bot. The other wheels (the ones with white gears) are designed for speed and easy manoeuvrability.

- Change the wheels by unlocking the battery compartment on the bottom of the BattleBot.

- Pull off the battery guard and replace the wheels with whichever ones fit your strategy (speed or torque).

- Place the battery guard back onto the bot and push the toggle back into the locked position.

This is also how to change the batteries in your bot, should you need to (they take AAA)

Choosing your side armour

There are two types of side armour pieces: thin and thick. The thinner armour is lower profile (and thus a smaller target for your opponent), but a little more flimsy than the thicker armour and can be easier to knock off. The thicker armour is obviously a little bigger target for your opponent, but is also sturdier.

All side armour pieces are magnetised and simply snap into place.

Choosing your top weapon

Now for the fun part! The top weapon is all about preference. While the side armour and wheels you choose will either equip your bot better for offense or defence, the top weapon is all about your attack style!

To change the top weapon, line up the pin on the bottom of the weapon with the hole on the top of the bot (top right corner) and snap it into place. Voila! You're ready for battle!

Changing up your build is all part of the fun! Experiment with different wheels, armour and weapons until you find your perfect combo!
